

## Integrated Pest Management

To ensure the health and safety concerns of students, staff and community members, the Monroe School District has adopted an Integrated Pest Management Plan (IPM) – EBB-AR. This plan emphasizes the least possible risk to students, staff and community.

The IPM plan is a proactive strategy that:

1. Focuses on the long-term prevention or suppression of pest problems through economically sound measures that:
  - a. Protect the health and safety of students and staff;
  - b. Protect the integrity of district buildings and grounds;
  - c. Maintain a productive learning environment; and
  - d. Protect local ecosystem health.
2. Focuses on the prevention of pest problems by working to reduce or eliminate conditions of property construction, operation and maintenance that promote or allow for the establishment, feeding, breeding and proliferation of pest populations or other conditions that are conducive to pests or that create harborage for pests;
3. Incorporates the use of sanitation, structural remediation or habitat manipulation or of mechanical, biological and chemical pest control measures that present a reduced risk or have a low-impact and, for the purpose of mitigating a declared pest emergency, the application of pesticides that are not low-impact pesticides;
4. Includes regular monitoring and inspections to detect pests, pest damage and unsanctioned pesticide usage;
5. Evaluates the need for pest control by identifying acceptable pest population density levels;
6. Monitors and evaluates the effectiveness of pest control measures;
7. Excludes the application of pesticides on a routine schedule for purely preventive purposes, other than applications of pesticides designed to attract or be consumed by pests;
8. Excludes the application of pesticides for purely aesthetic purposes;
9. Includes school staff education about sanitation, monitoring, inspection and pest control measures;

10. Gives preference to the use of nonchemical pest control measures;
11. Allows the use of low-impact pesticides if nonchemical pest control measures are ineffective; and
12. Allows the application of a pesticide that is not a low-impact pesticide only to mitigate a declared pest emergency or if the application is by, or at the direction or order of, a public health official.

The district shall designate the maintenance person as the Integrated Pest Management Plan Coordinator and give them the authority for overall implementation and evaluation of the IPM plan in coordination with the Superintendent.

### **Integrated Pest Management Plan Coordinator**

The IPM Plan Coordinator shall:

1. Attend not less than six hours of IPM training each year. The training shall include at least a general review of integrated pest management principles and the requirements of IPM as required by Oregon statute;
2. Ensure appropriate prior notices are given and posted warnings have been placed when pesticide applications are scheduled;
3. Oversee pest prevention efforts;
4. Ensure identification and evaluation of pest situation;
5. Determine the means of appropriately managing pest damage that will cause the least possible hazard to people, property and the environment;
6. Ensure the proper use and application of pesticide applications when non-pesticide controls have been unsuccessful;
7. Evaluate pest management results; and
8. Keep for at least four years following the application date, records of applied pesticides that include:
  - a. A copy of the label;
  - b. A copy of the Safety Data Sheet (SDS);
  - c. The brand name and USEPA registration number of the product;
  - d. The approximate amount and concentration of pesticide applied;
  - e. The location of where the pesticide was applied;

- f. The type of application and whether the application was effective;
  - g. The name(s) of the person(s) applying the pesticide;
  - h. The pesticide applicator's license numbers and pesticide trainee or certificate numbers of the person applying the pesticide;
  - i. The dates and times for the placement and removal of warning signs; and
  - j. Copies of all required notices given, including the dates the IPM Coordinator gave the notices.
9. Respond to inquires about the IPM plan and refer complainants to Board policy KL - Public Complaints;
10. Conduct outreach to district staff about the district's IPM plan.

END OF POLICY

## I. INTRODUCTION

Structural and landscape pests can pose significant problems in schools. Pests such as mice and cockroaches can trigger asthma. Mice and rats are carriers of disease. Many children are allergic to yellow jacket stings. The pesticides used to remediate these and other pests can also pose health risks to people, animals, and the environment. These same pesticides may pose special health risks to children due in large part to their still-developing organ systems. Because the health and safety of students and staff is our first priority – and a prerequisite to learning – it is the policy of Monroe School District #1J to approach pest management with the least possible risk to students and staff. In addition, Senate Bill 637 requires all school districts to implement integrated pest management in their schools. For this reason, the Monroe School District #1J adopts this integrated pest management plan for use on the campuses of our district.

## II. WHAT IS INTEGRATED PEST MANAGEMENT?

Integrated Pest Management, also known as IPM, is a process for achieving long-term, environmentally sound pest suppression through a wide variety of tactics. Control strategies in an IPM program include structural and procedural improvements to reduce the food, water, shelter, and access used by pests. Since IPM focuses on remediation of the fundamental reasons why pests are here, pesticides are rarely used and only when necessary.

### IPM Basics

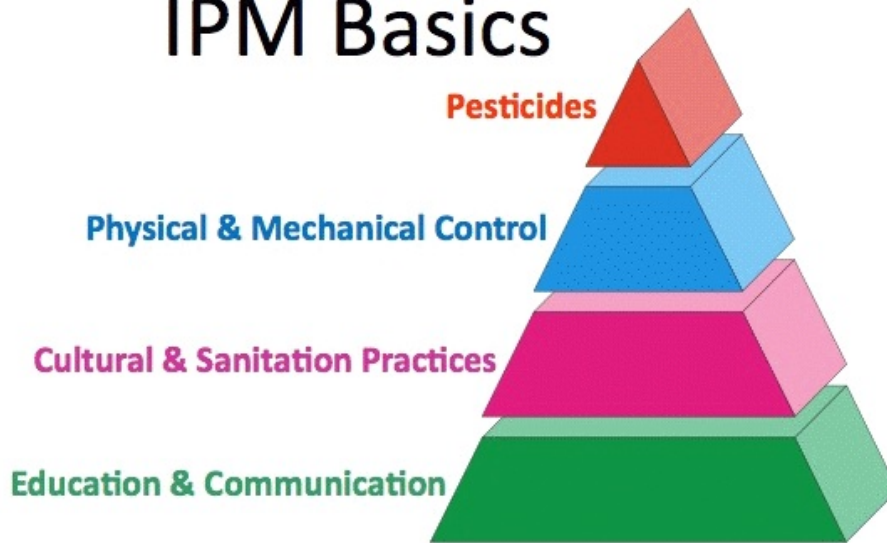

**Education and Communication:** The foundation for an effective IPM program is education and communication. We need to know what conditions can cause pest problems, why and how to monitor for pests, proper identification, pest behavior and biology before we can begin to manage pests effectively. Communication about pest issues is essential. A protocol for reporting pests or pest conducive conditions and a record of what action was taken is the most important part of an effective IPM program.

**Cultural & Sanitation:** Knowing how human behavior encourages pests helps you prevent them from becoming a problem. Small changes in cultural or sanitation practices can have significant effects on reducing pest populations. Cleaning under kitchen serving counters, reducing clutter in classrooms, putting dumpsters further from kitchen door/loading dock, proper irrigation scheduling, and over-seeding of turf areas are all examples of cultural and sanitation practices that can be employed to reduce pests.

**Physical & Mechanical:** Rodent traps, sticky monitoring traps for insects, door sweeps on external doors, sealing holes under sinks, proper drainage and mulching of landscapes, and keeping vegetation at least 24 inches from buildings are all examples of physical and mechanical control.

**Pesticides:** IPM focuses on remediation of the fundamental reasons why pests are here; pesticides should be rarely used and only when necessary.

# IPM Basics

### III. WHAT IS AN INTEGRATED PEST MANAGEMENT PLAN?

Senate Bill 637 defines an IPM plan as a proactive strategy that:

- A. Focuses on the long-term prevention or suppression of pest problems through economically sound measures that:
  - a) Protect the health and safety of students, staff and faculty;
  - b) Protect the integrity of campus buildings and grounds;
  - c) Maintain a productive learning environment; and
  - d) Protect local ecosystem health;
- B. Focuses on the prevention of pest problems by working to reduce or eliminate conditions of property construction, operation and maintenance that promote or allow for the establishment, feeding, breeding and proliferation of pest populations or other conditions that are conducive to pests or that create harborage for pests;
- C. Incorporates the use of sanitation, structural remediation or habitat manipulation or of mechanical, biological and chemical pest control measures that present a reduced risk or have a low impact and, for the purpose of mitigating a declared pest emergency, the application of pesticides that are not low-impact pesticides;
- D. Includes regular monitoring and inspections to detect pests, pest damage and unsanctioned pesticide usage;

- E. Evaluates the need for pest control by identifying acceptable pest population density levels;
- F. Monitors and evaluates the effectiveness of pest control measures;
- G. Excludes the application of pesticides on a routine schedule for purely preventive purposes, other than applications of pesticides designed to attract or be consumed by pests;
- H. Excludes the application of pesticides for purely aesthetic purposes;
- I. Includes school staff education about sanitation, monitoring and inspection and about pest control measures;
- J. Gives preference to the use of nonchemical pest control measures;
- K. Allows the use of low-impact pesticides if nonchemical pest control measures are ineffective; and
- L. Allows the application of a pesticide that is not a low-impact pesticide only to mitigate a declared pest emergency or if the application is by, or at the direction or order of, a public health official.

The above definition is the basis for Monroe School District's IPM plan. This plan fleshes out the required strategy from SB 637 for Monroe School District #1J.

Note: As mentioned above, SB 637 allows for the routine application of pesticides designed to be consumed by pests. To avoid a proliferation of pests and/or unnecessary applications of pesticides, several steps must be taken before any "routine" applications are allowed:

- 1) Staff must be educated on sanitation, monitoring, and exclusion as the primary means to control the pest.
- 2) An acceptable pest population density level must be established.
- 3) The use of sanitation, structural remediation or habitat manipulation, or of mechanical or biological control methods must be incorporated into the management strategy of the pest.
- 4) Documentation that the above steps were ineffective.
- 5) The pesticide label must be read thoroughly to make sure the pesticide will be used in strict compliance with all label instructions.

#### IV. SCHOOL DISTRICT IPM PLAN COORDINATOR

The Monroe School Board designates the Maintenance person as the IPM Plan Coordinator. The Coordinator is key to successful IPM implementation in Monroe School District #1J, and is

given the authority for overall implementation and evaluation of this plan. The Coordinator is responsible for:

- A. Attending not less than six hours of IPM training each year  
The training shall include at least a general review of IPM principles and the requirements of sections 2 to 9 of SB 637.
- B. Conducting outreach to the school community (custodians, maintenance, construction, grounds, faculty, and kitchen staff) about the school's IPM plan  
The IPM Plan Coordinator (or designee) will provide training as outlined in Section VII below.
- C. Overseeing pest prevention efforts  
The Coordinator will work with custodians, teachers, and maintenance to reduce clutter and food in the classrooms, and seal up pest entry points.
- D. Assuring that the decision-making process for implementing IPM in the district (section V) is followed  
The Coordinator will continually assess and improve the pest monitoring/reporting/action protocol.
- E. Assuring that all notification, posting, and record-keeping requirements in section VI are met when the decision to make a pesticide application is made;
- F. Maintaining the approved pesticides list as per section VIII; and
- G. Responding to inquiries and complaints about noncompliance with the plan.  
Responses to inquiries and complaints will be in writing and kept on record with the Coordinator.

## V. IPM DECISION-MAKING PROCESS

### A. Responsibilities of School District Employees

- 1. IPM Plan Coordinator Responsibilities. See Section IV above
- 2. Custodial Services Responsibilities. Custodial Services staff are responsible for the following:
  - 1) Attending annual IPM training provided by the IPM Plan Coordinator (or designee).

- 2) Placing and checking sticky insect monitoring traps in staff lounge, cafeteria, and kitchen as per the IPM Plan Coordinator's instructions.
- 3) Keeping records of pest complaints using pest logs placed in the staff lounge, cafeteria, and kitchen.
- 4) Assuring floor under serving counters is kept free of food and drink debris.
- 5) Sealing up small cracks or holes when reported by teachers or noticed by the custodian.
- 6) Recording his/her pest management actions in the pest logs.
- 7) Reporting pest problems that he/she cannot resolve in less than 15 minutes to the IPM Plan Coordinator.
- 8) Reporting teachers to the IPM Plan Coordinator who repeatedly refuse to reduce clutter and other pest-conducive conditions in their classrooms.
- 9) Reporting pest-conducive conditions to the IPM Plan Coordinator if the custodian cannot fix them in less than 15 minutes.
- 10) Confiscating any unapproved pesticides (such as aerosol spray cans) discovered during inspections or regular duties and delivering them to the IPM Plan Coordinator.
- 11) Following up on issues found in annual inspection report as instructed by the IPM Plan Coordinator (IPM Plan Coordinator will determine which schools receive annual inspections based on pest and pesticide use history).

### 3. Maintenance/Construction Responsibilities

Staff involved in facilities maintenance and construction is responsible for working with the IPM Plan Coordinator to ensure their daily tasks, projects and operations enhance effective pest management. This includes:

- 1) Receiving training from the IPM Plan Coordinator on the basic principles of IPM, sealing pest entry points, and sanitation during construction projects.
- 2) Continually monitoring for pest conducive conditions during daily work, and sealing small holes and cracks when noticed.
- 3) Working with the Coordinator to develop a protocol and priority list with deadlines for sealing holes, installing external door sweeps, and other pest exclusion needs which cannot be done in a short period of time.

- 4) Developing protocols and provisions for pest avoidance and prevention during construction and renovation projects. The IPM Plan Coordinator has the authority to halt construction projects if these protocols and provisions are not being met.

4. Kitchen Staff Responsibilities. Kitchen staff are responsible for:

- 1) Attending annual IPM training provided by the IPM Plan Coordinator.
- 2) Assuring floor under serving counters is kept free of food and drink debris.
- 3) Promptly emptying and removing corrugated cardboard materials.
- 4) Keeping exterior kitchen doors closed.
- 5) Reporting pest conducive conditions that require maintenance (e.g., leaky faucets, dumpster too near building, build-up of floor grease requiring spray-washing, etc.) to proper staff either orally or using pest logs.
- 6) Participating in any inspections conducted by custodian or IPM Plan Coordinator.
- 7) Checking sticky trap monitors once per month for cockroaches or drain flies. Immediately reporting these pests and any sightings of rodents or rodent droppings to custodian and marking them in pest log.

5. School Faculty Responsibilities. School faculty are responsible for:

- 1) Attending annual basic IPM training provided by the IPM Plan Coordinator.
- 2) Keeping their classrooms and work areas free of clutter.
- 3) Making sure students clean up after themselves when food or drink is consumed in the classroom.
- 4) Reporting pests and pest conducive conditions to the custodian, either orally or via the pest logs.
- 5) Following first steps of protocol for ant management before notifying the custodian (clean up any food the ants are eating, kill visible ants, wipe down area where ants were with soapy water, notify custodian only if ants continue to be found after following these steps).

6. School Principal Responsibilities. The School Principal is responsible for:

- 1) Scheduling time for teachers to receive annual training provided by the IPM Plan Coordinator.
- 2) Attending annual IPM training for teachers.
- 3) Assuring that teachers keep their rooms clean and free of clutter in accordance with the IPM Plan Coordinator's instructions.
- 4) Assuring that all faculty, administrators, staff, adult students and parents receive the annual notice (provided by the IPM Plan Coordinator) of potential pesticide products that could be used on school property as per Section VI.
- 5) Working with the IPM Plan Coordinator to make sure all notifications of pesticide applications reach all faculty, administrators, staff, adult students and parents.
- 6) Assuring that all staff fulfill their role as outlined in the district's IPM plan (reducing pest conducive conditions, participation in monitoring and pest log recording, attendance at IPM training(s), cooperation with the district's IPM Plan Coordinator).

#### B. Monitoring, Reporting, Action Protocol

Monitoring is the most important requirement of SB 637. It is the backbone of Monroe School District's IPM Program. It provides recent and accurate information to make intelligent and effective pest management decisions. It can be defined as the regular and ongoing inspection of areas where pest problems do or might occur. Information gathered from these inspections is always written down.

As much as possible, monitoring should be incorporated into the daily activities of school staff. Staff training on monitoring should include what to look for and how to record and report the information.

There are three levels of monitoring:

- 1) Casual observing/looking with no record keeping is not helpful
- 2) Casual observing/looking with written observations can be useful
- 3) Careful inspections with written observations is always useful

### Level 2 monitoring (all staff)

All staff will be trained to improve their “casual observing/looking” to level 2, and to report any pests and pest-conducive conditions they observe. Level 2 monitoring is conducted by faculty, administration, maintenance/construction, kitchen staff, school nurses, etc.

After training by the IPM Plan Coordinator on pests and pest conducive conditions, staff will be expected to report pests or pest conducive conditions they observe during the normal course of their daily work. Reporting will be done by filling out a work order and sending it to the custodian who will write them in a Pest Log. Custodial, maintenance, and kitchen staff are expected to set and/or check sticky monitoring traps as per the district’s IPM plan.

### Level 3 monitoring (Coordinator and Custodial staff)

The IPM Plan Coordinator and Custodians will periodically conduct monitoring at level 3.

Coordinator and Custodial staff will monitor structures:

- Pest conducive conditions inside and outside the building (structural deterioration, holes that allow pests to enter, conditions that provide pest harborage)
- The level of sanitation inside and out (waste disposal procedures, level of cleanliness inside and out, conditions that supply food and water to pests)
- The amount of pest damage and the number and location of pest signs (rodent droppings, termite shelter tubes, cockroaches caught in sticky traps, etc.)
- Human behaviors that affect the pests (working conditions that make it impossible to close doors or screens, food preparation procedures that provide food for pests, etc.)
- Their own management activities (caulking/sealing, cleaning, setting out traps, treating pests, etc.) and their effects on the pest population.

### Level 3 monitoring

1. Sticky monitoring traps for insects  
Sticky traps are neither a substitute for pesticides nor an alternative for reducing pest populations, but rather a diagnostic tool to aid in identifying a pest’s presence, their reproductive stage, the likely direction pests are coming from, and the number of pests.

All staff will be made aware of the traps and their purpose so they don’t disturb them. Custodians will be responsible for setting them out and checking them once per month, and replacing them once every four months. Kitchen staff will be responsible for checking those in the kitchen primarily for cockroaches and drain flies once per week.

After receiving training in the use of pest monitoring sticky traps by the IPM Plan Coordinator (or designee), custodial staff will be responsible for checking traps

placed in pre-determined “pest-vulnerable areas” on a monthly basis, and replacing them every four months. If custodial staff cannot interpret what they find in the monitors they will contact the IPM Plan Coordinator for assistance.

2. Reporting (pests, signs of pests, and conducive conditions)  
When staff observe pests or pest conducive conditions they should report them to the custodian for him/her to write them down.

3. Reporting “Pests of Concern”  
“A pest of concern” is a pest determined to be a public health risk or a significant nuisance pest. These include cockroaches, mice & rats, yellow jackets, cornered nutria, raccoons, cats, dogs, opossums, skunks, and bed bugs.

When pests of concern (or their droppings, nests, etc.) are observed, staff should immediately tell the building custodian. The custodian must contact the IPM Plan Coordinator immediately.

#### 4. Action

- a) Structural  
Any items (such as sealing up holes) that maintenance/construction staff or custodial staff observe (or see on Pest Logs) that they can resolve should be taken care of and this follow up action should be noted in the Pest Log.

Custodial staff will review Pest Logs weekly. Any items he/she cannot resolve should be marked in order of priority and a work order filled out for Maintenance.

Pest Logs will be sent to the IPM Plan Coordinator weekly. The Coordinator will determine further actions to be taken and when.

If the actions needed are not something the Coordinator can accomplish alone or with minimal assistance, the Coordinator will meet with Superintendent to develop a protocol and priority list with deadlines for sealing holes, installing external door sweeps, and other pest exclusion or pest management needs. The Coordinator will then generate a work order with a proposed deadline for completion based on the severity of the risk or nuisance.

The Coordinator will monitor the completion of the work order. If the work is not completed by the proposed deadline, the Coordinator will write a follow-up e-mail to the Superintendent. Upon completion of the work, the Coordinator and the school custodian will be notified. The Coordinator will keep records of time spent to manage the pest.

Small Ants: When staff observe a small number of ants they must report the incident to the custodian.

If the ants come back or there are more than a small number of them, staff must write a work order to the custodian.

The custodian will forward the work order to the Coordinator.

To avoid a proliferation of small ants and/or unnecessary applications of pesticides, the routine use of ant baits is not permitted without:

- 1<sup>st</sup> Educating staff on sanitation, monitoring, and exclusion as the primary means to control the ants.
- 2<sup>nd</sup> Establishing an acceptable pest population density
- 3<sup>rd</sup> Improving sanitation (e.g. cleaning up crumbs and other food sources) and structural remediation (sealing up cracks or holes where the ants are coming from).

For more detailed information on small ants, see Appendix 1a.

5. Acceptable Thresholds (pest population density levels)  
A threshold is the number of pests that can be tolerated before taking action. The acceptable threshold for cockroaches, mice, rats, raccoons, cats, dogs, opossums, skunks, and nutria is 0.

Acceptable thresholds for other pests will be determined by the IPM Plan Coordinator.

### C. Inspections

1. Routine Inspections  
The IPM Plan Coordinator will conduct routine inspections of different schools throughout the year. The Coordinator will write a summary report to the Superintendent.
2. Annual Inspections  
The IPM Plan Coordinator will conduct annual inspections at individual schools. The annual inspections will be more thorough than the routine inspections, and will use the Annual IPM Inspection Form (see Appendix 2) to guide the inspections.

### D. Pest Emergencies (see also Section VI. B. below)

**IMPORTANT:** If a pest emergency is declared, the area must be evacuated and cordoned off before taking any other steps. When the IPM Plan Coordinator, after consultation with school faculty and administration, determines that the presence of a pest or pests

immediately threatens the health or safety of students, staff, faculty members or members of the public using the campus, or the structural integrity of campus facilities, he or she may declare a pest emergency.

E. Annual IPM Report (completed by IPM Plan Coordinator)

In January of each year, the IPM Plan Coordinator will provide the Monroe School Board an annual IPM report. The report will include a summary of data gathered from Pest Logs. See Appendix 9 for a template for the annual IPM report.

Prevention and management steps taken that proved to be ineffective and led to the decision to make a pesticide application will be copied and pasted or incorporated into the annual report of pesticide applications (see section VII. D)

## VI. REQUIRED TRAINING/EDUCATION

SB 637 requires staff education “about sanitation, monitoring and inspection and about pest control measures”. All staff should have at least a general review of IPM principles and strategy as outlined in Sections II and III.

A. IPM Plan Coordinator Training

SB 637 requires that the IPM Plan Coordinator “shall complete not less than six hours of training each year. The training shall include at least a general review of IPM principles and the requirements of sections 2 to 9 of this 2009 Act.”

Content should include health and economic issues associated with pests in schools, exclusion practices, pest identification and biology for common pests, common challenges with monitoring-reporting-action protocols, proper use of sticky monitoring traps for insects, and hands-on training on proper inspection techniques.

B. Training for Custodial Staff

The IPM Plan Coordinator (or a designee of the Coordinator) will train custodial staff at least annually on sanitation, monitoring, inspection, and reporting, and their responsibilities as outlined in Section V. A.

C. Training for Maintenance and Construction Staff

The IPM Plan Coordinator will train maintenance staff at least annually on identifying pest conducive conditions and mechanical control methods, and their responsibilities as outlined in Section V. A.

D. Training for Kitchen Staff

The IPM Plan Coordinator will train kitchen staff at least once per year on the basic principals of IPM and their responsibilities as outlined in Section V. A.

## E. Training for Faculty and Principal

The IPM Plan Coordinator will train faculty and principals at least once per year on the basic principals of IPM and their responsibilities as outlined in Section V. A. These short training are arranged by the Coordinator with individual principals when openings in their school Faculty Meeting schedules permit.

## F. Other Training

Basic training on the principals of IPM and the main points of this IPM Plan should also be provided to school nurses, administrative staff, superintendents, and students. Coaches who use athletic fields should be given an overview of basic monitoring and IPM practices for turf so they understand key pest problems to look out for and when to report them.

## VII. PESTICIDE APPLICATIONS: REQUIRED NOTIFICATION, POSTING, RECORD KEEPING, AND REPORTING

Any pesticide application (this includes weed control products, ant baits, and all professional and over-the-counter products) on school property must be made by a licensed commercial or public pesticide applicator. At the beginning of each school year, all faculty, administrators, staff, adult students and parents will be given a list of potential pesticide products that could be used in the event that other pest management measures are ineffective. They will also be informed of the procedures for notification and posting of individual applications, including those for pest emergencies. This information will be provided to all the above.

## A. Notification and Posting for Non-emergencies

When prevention or management of pests through other measures proves to be ineffective, the use of a low-risk pesticide is permissible. *Documentation of these measures is a pre-requisite to the approval of any application of a low-risk pesticide. This documentation will remain on file with the IPM Plan Coordinator and at the office of the head custodian where the application takes place.*

No non-emergency pesticide applications may occur in or around a school until after 3:30 on a Friday while school is in session, unless the IPM Plan Coordinator authorizes an exception. If the labeling of a pesticide product specifies a reentry time, a pesticide may not be applied to an area of campus where the school expects students to be present before expiration of that reentry time. If the labeling does not specify a reentry time, a pesticide may not be applied to an area of a campus where the school expects students to be present before expiration of a reentry time that the IPM Plan Coordinator determines to be appropriate based on the times at which students would normally be expected to be in the area, area ventilation and whether the area will be cleaned before students are present.

The IPM Plan Coordinator will give written notice of a proposed pesticide application at

least 24 hours before the application occurs.

The notice must identify the name, trademark or type of pesticide product, the EPA registration number of the product, the expected area of the application, the expected date of application and the reason for the application.

The IPM Plan Coordinator shall place warning signs around pesticide application areas beginning no later than 24 hours before the application occurs and ending no earlier than 72 hours after the application occurs.

A warning sign must bear the words “Warning: pesticide-treated area”, and give the expected or actual date and time for the application, the expected or actual reentry time, and provide the telephone number of a contact person (the person who is to make the application and/or the IPM Plan Coordinator).

#### B. Notification and Posting for Emergencies

1. The IPM Plan Coordinator may not declare the existence of a pest emergency until after consultation with school faculty and administration.
2. If a pesticide is applied at a campus due to a pest emergency, the Plan Coordinator shall review the IPM plan to determine whether modification of the plan might prevent future pest emergencies, and provide a written report of such to the Monroe School Board.
3. The Monroe School Board shall review and take formal action on any recommendations in the report.

The declaration of the existence of a pest emergency is the only time a non low-impact pesticide may be applied.

If a pest emergency is declared, the area must be evacuated and cordoned off before taking any other steps.

If a pest emergency makes it impracticable to give a pesticide application notice no later than 24 hours before the pesticide application occurs, the IPM Plan Coordinator shall send the notice no later than 24 hours after the application occurs.

The IPM Plan Coordinator or designee shall place notification signs around the area as soon as practicable but no later than at the time the application occurs.

Note: Section 2 (3) (L) of SB 637 also allows the application of a non-low-impact pesticide “by, or at the direction or order of, a public health official”. If this occurs, every effort must be made to comply with notification and posting requirements above.

C. Record Keeping of Pesticide Applications

The IPM Plan Coordinator or designee shall keep a copy of the following pesticide product information on file at the head custodian's office at the school where the application occurred, and at the office of the IPM Plan Coordinator:

- A copy of the label
- A copy of the MSDS
- The brand name and USEPA registration number of the product
- The approximate amount and concentration of product applied
- The location of the application
- The type of application and whether the application proved effective
- The pesticide applicator's license numbers and pesticide trainee or certificate numbers of the person applying the pesticide
- The name(s) of the person(s) applying the pesticide
- The dates and times for the placement and removal of warning signs
- Copies of all required notices given, including the dates the IPM Plan Coordinator gave the notices

The above records must be kept on file at the head custodian's office at the school where the application occurred, and at the office of the IPM Plan Coordinator, for at least four years following the application date.

D. Annual Report of Pesticide Applications

In January of each year, the IPM Plan Coordinator will provide the Monroe School Board an annual report of all pesticide applications made the previous year. The report will contain the following for each application:

- The brand name and USEPA registration number of the product applied
- The approximate amount and concentration of product applied
- The location of the application
- The prevention or management steps taken that proved to be ineffective and led to the decision to make a pesticide application
- The type of application and whether the application proved effective

VIII. APPROVED LIST OF LOW-IMPACT PESTICIDES

Note: All pesticides used must be used in strict accordance with label instructions.

According to Section 3 (5) of Enrolled Senate Bill 637 (SB 637-B), the governing body of a school district shall adopt a list of low-impact pesticides for use with their integrated pest management plan. The governing body may include any product on the list except products that:

- A. Contain a pesticide product or active ingredient that has the signal words “warning” or “danger” on the label;
- B. Contain a pesticide product classified as a human carcinogen or probable human carcinogen under the United States Environmental Protection Agency 1986 Guidelines for Carcinogen Risk Assessment; or
- C. Contain a pesticide product classified as carcinogenic to humans or likely to be carcinogenic to humans under the United States Environmental Protection Agency 2003 Draft Final Guidelines for Carcinogen Risk Assessment.

As a part of pesticide registration under the Federal Insecticide Fungicide and Rodenticide Act (FIFRA) and re-registration required by the Food Quality Protection Act (FQPA), EPA Office of Pesticide Programs (OPP) classifies pesticide active ingredients (a.i.) with regards to their potential to cause cancer in humans. Depending on when a pesticide active ingredient was last evaluated the classification system used may differ as described above. The pesticide a.i. classification can usually be found in the re-registration eligibility decision (RED at [LINK"http://www.epa.gov/pesticides/reregistration/status.htm"](http://www.epa.gov/pesticides/reregistration/status.htm)<http://www.epa.gov/pesticides/reregistration/status.htm> or in the Integrated Risk Information System (IRIS) at <http://www.epa.gov/IRIS/>

**The National Pesticide Information Center (<http://npic.orst.edu/>) can be contacted at 1-800-858-7378 or [npic@ace.orst.edu](mailto:npic@ace.orst.edu) for assistance in determining a pesticide a.i. cancer classification.**

**LIST OF APPENDICES**

**Appendix 1 To be developed: Pest Management for Specific Pests (Lifecycle, What-Where-  
How they Eat/Drink/Shelter, Monitoring, Prevention, Threshold Levels, Management Options, Evaluation of Options Chosen for Specific Pests)**

**a-Ants (Small Ants)**

**To be developed:**

**b-Ants (Carpenter Ants) (To be developed)**

**c-Bats (To be developed)**

**d-Bed Bugs (To be developed)**
